

AGRAM S.A.

Agram S.A. is one of the biggest fruit and vegetables processing companies in Poland. Our factories are located in the eastern part of Poland, on the land devoid of industrial facilities and the most heavily used transport roads, in the fertile soils of the Lublin region, where our farmers collect the raw materials for our two cold stores located in Lublin and Motycz. All production processes are supervised by the well-qualified agronomists, technologists and quality controllers to meet our customers' requirements. Agram S.A. works in accordance with certified quality systems: ISO22000 and HACCP and certified BRC and IFS standards. Our products are supplied to both domestic and international customers from the EU and outside Europe. We are able to process and store up to 30 thousand tons of frozen fruit and vegetables. Our factories are well-equipped with advanced freezing tunnels and accompanying equipment including laser and optical sorters as well as a precise packaging machine dedicated to packing fruit, vegetables and mixes in bags ranging in weight from 350g up to 2.5 kg.
