

INWENT PIOTR ZOLKOWSKI

INWENT has been operating on the market since 1980. Thanks to gained experience and cooperation with customers it creates solutions with a view to comfortable and energy-saving buildings. INWENT has developed an innovative air handling unit which means a true breakthrough in ventilation technology. Thanks to modern solutions, it meets the requirements of the highest energy saving classes. The AHU is designed to be used in various ventilation and air conditioning systems, and is produced according to customer's individual needs. We offer an air handling unit for public and private investors who want to improve the quality of internal air or provide effective ventilation in large volume buildings. This unit will reduce costs of operation and consumption of electric energy in the structure due to highly efficient recuperation section and automation. In contrast to commonly used solutions, we offer a device with high efficiency, a wide range of air efficiency, which is easy to operate and the application on which will bring measurable economic benefits for the user.

Products & Services: Air handling units with automatic and monitoring system.
