

PROZAP SP. Z O.O.

PROZAP is a multi-discipline, specialty engineering company, participating actively in the development of Polish chemical industry sector for 40 years. Owing to a continuous increase of competence, employing state-of-the-art design techniques as well as a bold strategy of growth, the activities of the company on the Polish market are as intense as those overseas. PROZAP has documented experience in designing new and revamping of existing industrial plants producing fertilizers and other chemicals, e.g. ammonia, urea, AdBlue, ammonium nitrate, ammonium sulphate, sulphuric and nitric acids, melamine, caprolactam, toluene diisocyanate (TDI) and many others. The company specializes in technical solutions for control and abatement of the emission of dusts and ammonia from fertilizer plants, SO₂ from power station flue gases (innovative, wet, ammonia process) or NO_x from nitric acid plants. PROZAP offers a full scope of comprehensive services: from a concept, through feasibility studies, technology selection and transfer to design, procurement, start-up, commissioning, supervision, personnel training and as-build documentation. The company is experienced in project execution as a PMC and EPC, turn-key contractor. The company employs 110 professionals with average experience of over 10 years.
