

# LUBSTA SP. Z O.O.

LUBSTA Sp. z o.o. produces steel structures of various uses and offers services in repairing steel products and in processing steel. In spite of the fact that the history of LUBSTA is short, our products are used in Poland and in Western Europe. A wide range of our products are also sold to Scandinavian countries. There they win a significant recognition thanks to their unquestionable quality and competitive prices. Services offered by LUBSTA do not end with producing items. We assure quality tests of our products performed according to Polish and European norms, prepared at the request of a client. We also make measuring reports and protocols of testing welds (any method), design products and offer assembly services.
